

Modern Machine Learning in R

mlr3

Department of Statistics – LMU Munich

Intro

• R gives you access to many machine learning methods

- R gives you access to many machine learning methods
- ...but without a unified interface

- R gives you access to many machine learning methods
- ...but without a unified interface
- things like performance evaluation are cumbersome

- R gives you access to many machine learning methods
- ...but without a unified interface
- things like performance evaluation are cumbersome

Example:

```
# Specify what we want to model in a formula: target ~ features
svm_model = e1071::svm(Species ~ ., data = iris)
```

- R gives you access to many machine learning methods
- ...but without a unified interface
- things like performance evaluation are cumbersome

Example:

```
# Specify what we want to model in a formula: target ~ features
svm_model = e1071::svm(Species ~ ., data = iris)
```

VS.

```
# Pass the features as a matrix and the target as a vector
xgb_model = xgboost::xgboost(data = as.matrix(iris[1:4]),
    label = iris$Species, nrounds = 10)
```

```
library("mlr3")
```

Ingredients:

- Data / Task
- Learning Algorithms
- Performance Evaluation
- Performance Comparison

R6

mlr3 uses the *R6* class system. Some things may seem unusual if you see them for the first time.

• Objects are created using <Class>\$new().

```
task = TaskClassif$new("iris", iris, "Species")
```

mlr3 uses the *R6* class system. Some things may seem unusual if you see them for the first time.

• Objects are created using <Class>\$new().

```
task = TaskClassif$new("iris", iris, "Species")
```

• Objects have *fields* that contain information about the object.

mlr3 uses the *R6* class system. Some things may seem unusual if you see them for the first time.

Objects are created using <Class>\$new().

```
task = TaskClassif$new("iris", iris, "Species")
```

• Objects have *fields* that contain information about the object.

```
task$nrow
#> [1] 150
```

• Objects have *methods* that are called like functions:

```
task$filter(rows = 1:10)
```

mlr3 uses the R6 class system. Some things may seem unusual if you see them for the first time.

Objects are created using <Class>\$new().

```
task = TaskClassif$new("iris", iris, "Species")
```

• Objects have *fields* that contain information about the object.

```
task$nrow
#> [1] 150
```

• Objects have *methods* that are called like functions:

```
task$filter(rows = 1:10)
```

Methods may change ("mutate") the object (reference semantics)!

R6 AND ACTIVE BINDINGS

Some fields of R6-objects may be "Active Bindings". Internally they are realized as functions that are called whenever the value is set or retrieved.

Active bindings for read-only fields

```
task$nrow = 11
#> Error: Field/Binding is read-only
```

R6 AND ACTIVE BINDINGS

Some fields of R6-objects may be "Active Bindings". Internally they are realized as functions that are called whenever the value is set or retrieved.

Active bindings for read-only fields

```
task$nrow = 11
#> Error: Field/Binding is read-only
```

Active bindings for argument checking

```
task$properties = NULL

#> Error in assert_set(rhs, .var.name = "properties"):
Assertion on 'properties' failed: Must be of type
'character', not 'NULL'.

task$properties = c("property1", "property2") # works
```

MLR3 PHILOSOPHY

- Overcome limitations of S3 with the help of R6
 - Truly object-oriented: data and methods live in the same object
 - Make use of inheritance
 - Reference semantics

MLR3 PHILOSOPHY

- Overcome limitations of S3 with the help of R6
 - Truly object-oriented: data and methods live in the same object
 - Make use of inheritance
 - Reference semantics
- Embrace data.table, both for arguments and internally
 - Fast operations for tabular data
 - List columns to arrange complex objects in tabular structure

MLR3 PHILOSOPHY

- Overcome limitations of S3 with the help of R6
 - Truly object-oriented: data and methods live in the same object
 - Make use of inheritance
 - Reference semantics
- Embrace data.table, both for arguments and internally
 - Fast operations for tabular data
 - List columns to arrange complex objects in tabular structure
- Be light on dependencies:
 - R6, data.table, lgr, uuid, mlbench, digest
 - Plus some of our own packages (backports, checkmate, ...)

Data

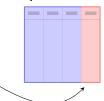

Tabular data

- Tabular data
- Features

Dictionaries

 Ordinary constructors: TaskClassif\$new() / LearnerClassifRpart\$new()

- Ordinary constructors: TaskClassif\$new() / LearnerClassifRpart\$new()
- ⇒ mlr3 offers Short Form Constructors that are less verbose

- Ordinary constructors: TaskClassif\$new() / LearnerClassifRpart\$new()
- ⇒ mlr3 offers Short Form Constructors that are less verbose
 - They access Dictionary of objects:

- Ordinary constructors: TaskClassif\$new() / LearnerClassifRpart\$new()
- ⇒ mlr3 offers Short Form Constructors that are less verbose
 - They access Dictionary of objects:

Object	Dictionary	Short Form
Task	mlr_tasks	tsk()
Learner	mlr_learners	lrn()
Measure	mlr_measures	msr()
Resampling	mlr_resamplings	rsmp()
Dictionaries can get populated by add-on packages (e.g. mlr3learners)		

DICTIONARIES

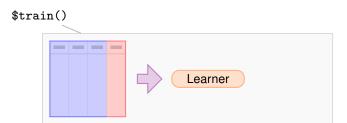

```
# list items
tsk()
#> <DictionaryTask> with 15 stored values
#> Keys: boston_housing, breast_cancer, faithful,
#>
   german_credit, iris, lung, mtcars, pima, precip, rats,
#>
  sonar, spam, unemployment, wine, zoo
# retrieve object
tsk("iris")
#> <TaskClassif:iris> (150 x 5)
#> * Target: Species
#> * Properties: multiclass
#> * Features (4):
#>
    - dbl (4): Petal.Length, Petal.Width, Sepal.Length,
#>
      Sepal.Width
```

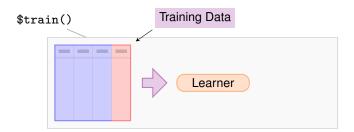

SHORT FORMS AND DICTIONARIES

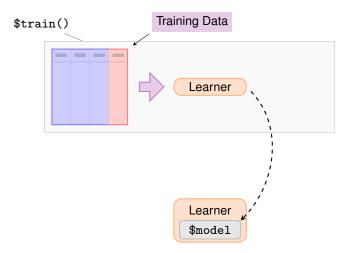

as.data.table(<DICTIONARY>) creates a data.table with metadata about objects in dictionaries:

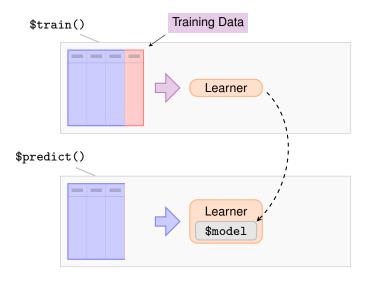

```
mlr_learners_table = as.data.table(mlr_learners)
mlr_learners_table[1:10, c("key", "packages", "predict_types")]
                       key packages predict_types
   1:
        classif.cv_glmnet
                             glmnet response, prob
#
   2:
            classif.debug
                                    response, prob
   3: classif.featureless
                                    response, prob
#
  4:
           classif.glmnet
                             glmnet response, prob
   5:
             classif.kknn
                               kknn response, prob
   6:
              classif.lda
                               MASS response, prob
#
  7:
        classif.log_reg
                              stats response, prob
  8:
        classif.multinom
                               nnet response, prob
      classif.naive_bayes
                              e1071 response, prob
 10:
              classif.qda
                               MASS response, prob
```

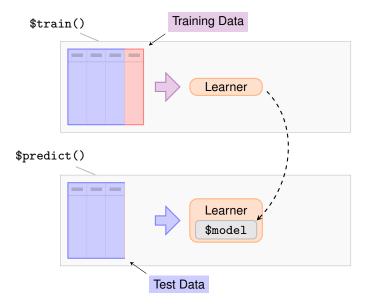

Learning Algorithms

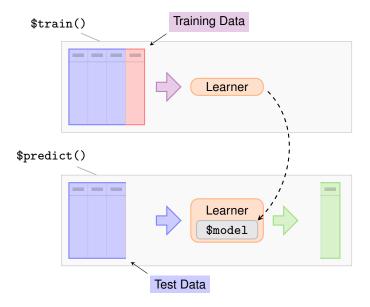

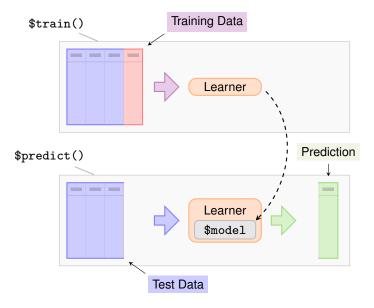

• Get a Learner provided by mlr

```
learner = lrn("classif.rpart")
```

• Get a Learner provided by mlr

```
learner = lrn("classif.rpart")
```

• Train the Learner

learner\$train(task)

Get a Learner provided by mlr

```
learner = lrn("classif.rpart")
```

• Train the Learner

```
learner$train(task)
```

The \$model is the rpart model: a decision tree

```

#> 10:
         keep_model ParamLgl
                               NA
                                     NA
                                         TRUE, FALSE
```

• Changing them changes the Learner behavior

```
learner$param_set$values = list(maxdepth = 1, xval = 0)
learner$train(task)
```

HYPERPARAMETERS

This gives a smaller decision tree

• Let's make a prediction for some new data, e.g.:

```
new_data

# Sepal.Length Sepal.Width Petal.Length Petal.Width

# 1 4 3 2 1

# 2 2 2 3 2 3
```

Let's make a prediction for some new data, e.g.:

```
new_data

# Sepal.Length Sepal.Width Petal.Length Petal.Width

# 1 4 3 2 1

# 2 2 2 3 2
```

• To do so, we call the \$predict_newdata() method using the new data:

```
prediction = learner$predict_newdata(new_data)
```

Let's make a prediction for some new data, e.g.:

```
new_data
# Sepal.Length Sepal.Width Petal.Length Petal.Width
# 1     4     3     2     1
# 2     2     2     3     2
```

• To do so, we call the \$predict_newdata() method using the new data:

```
prediction = learner$predict_newdata(new_data)
```

We get a Prediction object:

```
prediction
#> <PredictionClassif> for 2 observations:
#> row_id truth response
#> 1 <NA> setosa
#> 2 <NA> versicolor
```

Let's make a prediction for some new data, e.g.:

```
new_data
      Sepal.Length Sepal.Width Petal.Length Petal.Width
• To do so, we call the $predict_newdata() method using the new data:
  prediction = learner$predict_newdata(new_data)
  We get a Prediction object:
  prediction
  #> <PredictionClassif> for 2 observations:
      row_id truth response
                       setosa
```

Let's make a prediction for some new data, e.g.:

```
new_data
      Sepal.Length Sepal.Width Petal.Length Petal.Width
• To do so, we call the $predict_newdata() method using the new data:
  prediction = learner$predict_newdata(new_data)
  We get a Prediction object:
  prediction
  #> <PredictionClassif> for 2 observations:
      row_id truth
                     response
              <NA>
                        setosa
              <NA> versicolor
```

 We can make the Learner predict probabilities when we set predict_type:

```
learner$predict_type = "prob"
learner$predict_newdata(new_data)

# <PredictionClassif> for 2 observations:
# row_id truth response prob.setosa prob.versicolor
# 1 <NA> setosa 1 0.0
# 2 <NA> versicolor 0 0.5
# prob.virginica
# 0.0
# 0.5
```

What exactly is a Prediction object?

• Contains predictions and offers useful access fields / methods

What exactly is a Prediction object?

- Contains predictions and offers useful access fields / methods
- ⇒ Use as.data.table() to extract data

```
as.data.table(prediction)

#> row_id truth response

#> 1: 1 <NA> setosa

#> 2: 2 <NA> versicolor
```

What exactly is a Prediction object?

- Contains predictions and offers useful access fields / methods
- ⇒ Use as.data.table() to extract data

```
as.data.table(prediction)
#> row_id truth response
#> 1: 1 <NA> setosa
#> 2: 2 <NA> versicolor
```

⇒ Active bindings and functions that give further information: \$response, \$truth,...

```
prediction$response
#> [1] setosa versicolor
#> Levels: setosa versicolor virginica
```

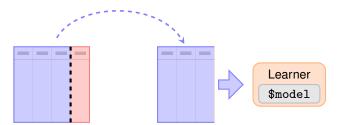

Performance

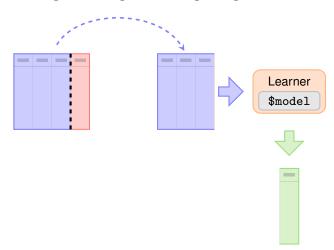

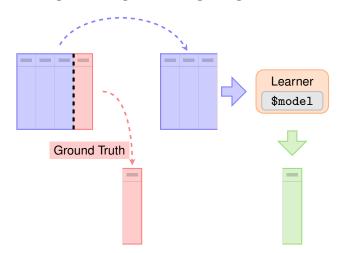

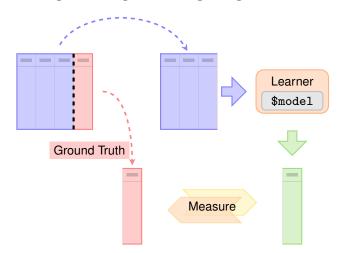

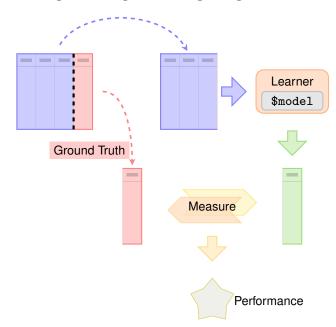

Prediction 'Task' with known data

Prediction 'Task' with known data

```
known_truth_task$data()

# Species Petal.Length Petal.Width Sepal.Length Sepal.Width
# 1: setosa 2 1 4 3
# 2: setosa 3 2 2 2 2
```

Predict again

```
pred = learner$predict(known_truth_task)
pred

#> <PredictionClassif> for 2 observations:
#> row_id truth response
#> 1 setosa setosa
#> 2 setosa virginica
```

Prediction 'Task' with known data

```
known_truth_task$data()

# Species Petal.Length Petal.Width Sepal.Length Sepal.Width
# 1: setosa 2 1 4 3
# 2: setosa 3 2 2 2 2
```

Predict again

```
pred = learner$predict(known_truth_task)
pred

#> <PredictionClassif> for 2 observations:

#> row_id truth response

#> 1 setosa setosa

#> 2 setosa virginica
```

Score the prediction

```
pred$score(msr("classif.ce"))
#> classif.ce
#> 0.5
```

PERFORMANCE EVALUATION

Prediction 'Task' with known data

Predict again

```
pred = learner$predict(known_truth_task)
pred

#> <PredictionClassif> for 2 observations:
#> row_id truth response
#> 1 setosa setosa
#> 2 setosa virginica
```

Score the prediction

```
pred$score(msr("classif.ce"))
#> classif.ce
#> 0.5
```

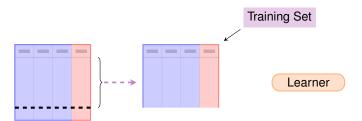

Resampling

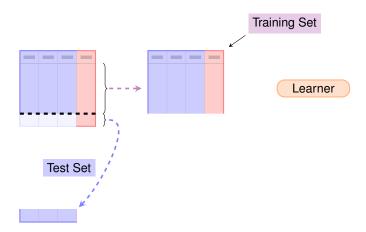

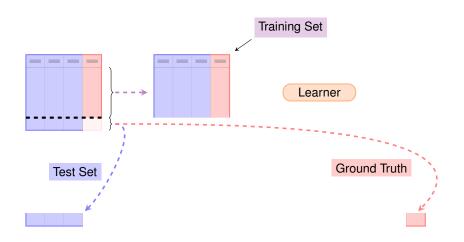

Learner

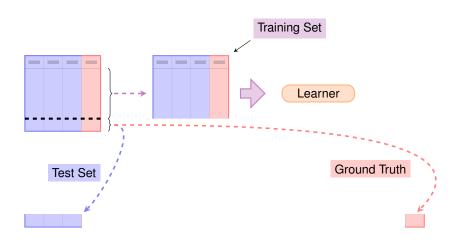

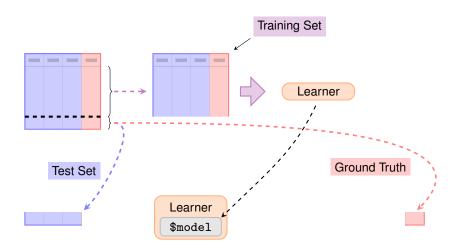

Learner

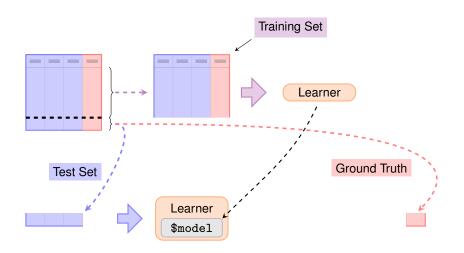

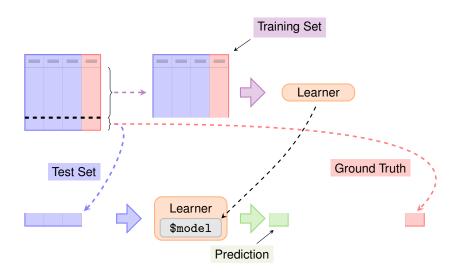

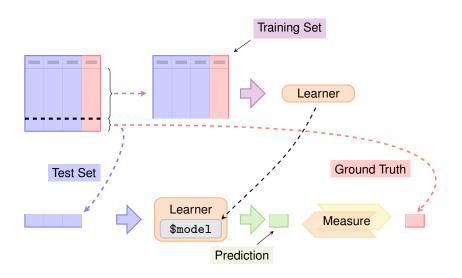

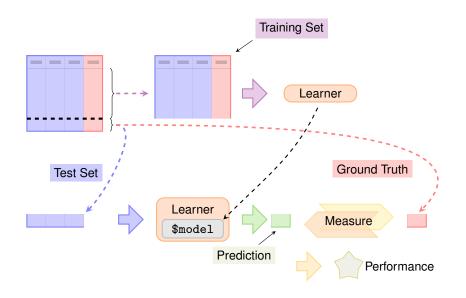

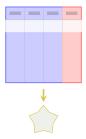

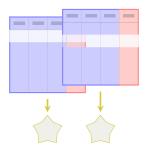

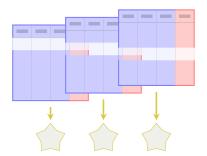

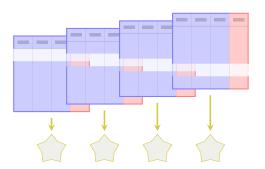

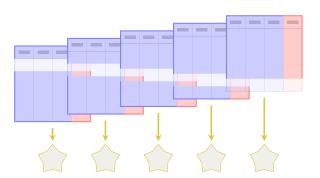

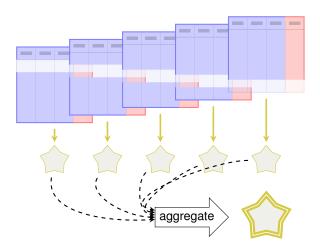

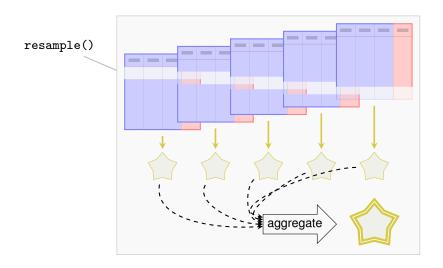

• Resample description: How to split the data

```
cv5 = rsmp("cv", folds = 5)
```

• Resample description: How to split the data

```
cv5 = rsmp("cv", folds = 5)
```

• Use the resample() function for resampling:

```
rr = resample(task, learner, cv5)
```

Resample description: How to split the data

```
cv5 = rsmp("cv", folds = 5)
```

• Use the resample() function for resampling:

```
rr = resample(task, learner, cv5)
```

• We get a ResamplingResult object:

```
print(rr)
#> <ResampleResult> of 5 iterations
#> * Task: iris
#> * Learner: classif.rpart
#> * Warnings: 0 in 0 iterations
#> * Errors: 0 in 0 iterations
```

What exactly is a ResamplingResult object?

What exactly is a ResamplingResult object? Remember Prediction:

What exactly is a ResamplingResult object?
Remember Prediction:

• Get a table representation using as.data.table()

What exactly is a ResamplingResult object? Remember Prediction:

• Get a table representation using as.data.table()

• Active bindings and functions that make information easily accessible

• Calculate performance:

```
rr$aggregate(msr("classif.ce"))
#> classif.ce
#> 0.073
```

Calculate performance:

```
rr$aggregate(msr("classif.ce"))
#> classif.ce
#> 0.073
```

Get predictions

```
rr$prediction()
#> <PredictionClassif> for 150 observations:
#>
      row_id truth response
#>
           5 setosa
                         setosa
#>
         14 setosa setosa
#>
          18
               setosa setosa
         139 virginica virginica
#>
#>
         145 virginica virginica
#>
         146 virginica virginica
```

Predictions of individual folds

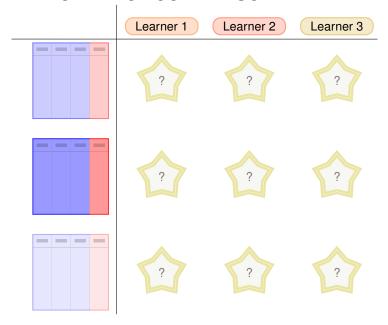

```
predictions = rr$predictions()
predictions[[1]]
#> <PredictionClassif> for 30 observations:
#>
      row_id truth response
#>
           5 setosa
                         setosa
          14 setosa setosa
#>
#>
          18
               setosa setosa
#>
         132 virginica virginica
#>
         137 virginica virginica
         147 virginica virginica
#>
```

Predictions of individual folds

```
predictions = rr$predictions()
predictions[[1]]
#> <PredictionClassif> for 30 observations:
#>
      row_id truth response
#>
           5 setosa setosa
        14 setosa setosa
#>
        18 setosa setosa
#>
#>
         132 virginica virginica
#>
         137 virginica virginica
         147 virginica virginica
#>
```

Score of individual folds

Benchmark

Multiple Learners, multiple Tasks:

```
library("mlr3learners")
learners = list(lrn("classif.rpart"), lrn("classif.kknn"))
tasks = list(tsk("iris"), tsk("sonar"), tsk("wine"))
```

Multiple Learners, multiple Tasks:

```
library("mlr3learners")
learners = list(lrn("classif.rpart"), lrn("classif.kknn"))
tasks = list(tsk("iris"), tsk("sonar"), tsk("wine"))
```

• Set up the *design* and execute benchmark:

```
design = benchmark_grid(tasks, learners, cv5)
bmr = benchmark(design)
```

Multiple Learners, multiple Tasks:

```
library("mlr3learners")
learners = list(lrn("classif.rpart"), lrn("classif.kknn"))
tasks = list(tsk("iris"), tsk("sonar"), tsk("wine"))
```

• Set up the *design* and execute benchmark:

```
design = benchmark_grid(tasks, learners, cv5)
bmr = benchmark(design)
```

 We get a BenchmarkResult object which shows that kknn outperforms rpart:

```
bmr_ag = bmr$aggregate()
bmr_ag[, c("task_id", "learner_id", "classif.ce")]
#> task_id learner_id classif.ce
#> 1: iris classif.rpart 0.060
#> 2: iris classif.kknn 0.060
#> 3: sonar classif.rpart 0.279
#> 4: sonar classif.kknn 0.168
#> 5: wine classif.rpart 0.101
#> 6: wine classif.kknn 0.051
```

What exactly is a BenchmarkResult object?

What exactly is a BenchmarkResult object?

Just like Prediction and ResamplingResult!

What exactly is a BenchmarkResult object?

Just like Prediction and ResamplingResult!

• Table representation using as.data.table()

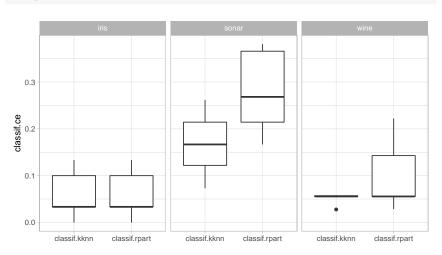

What exactly is a BenchmarkResult object?

Just like Prediction and ResamplingResult!

- Table representation using as.data.table()
- Active bindings and functions that make information easily accessible

The mlr3viz package contains autoplot() functions for many mlr3 objects

library(mlr3viz)
autoplot(bmr)

Control of Execution

CONTROL OF EXECUTION

Parallelization

```
future::plan("multicore")
```

- runs each resampling iteration as a job
- also allows nested resampling (although not needed here)

Encapsulation

```
learner$encapsulate = c(train = "callr", predict = "callr")
```

- Spawns a separate R process to train the learner
- Learner may segfault without tearing down the session
- Logs are captured
- Possibilty to have a fallback to create predictions

How to get Help

HOW TO GET HELP

- Where to start?
 - Check these slides
 - Check the mir3book https://mir3book.mir-org.com

HOW TO GET HELP

- Where to start?
 - Check these slides
 - Check the mlr3book https://mlr3book.mlr-org.com
- Get help for R6 objects?
 - Find out what kind of R6 object you have:

```
class(bmr)
#> [1] "BenchmarkResult" "R6"
```

Go to the corresponding help page:

?BenchmarkResult

New: open the corresponding man page with

```
learner$help()
```
